DYNAMIC LINES

PROLIGHT
designed to create

LINE

SUPER-G is a modular lighting system that transforms light into free-flowing lines. Composed of straight segments, curves and intersections, it allows designers to sketch light directly into architecture, creating dynamic compositions with precision and control. A system where movement and structure meet in a continuous, expressive language.

unlimited freedom in curves

SUPER-G and SUPER-G SLIM are modular luminaires composed of individual elements that can be seamlessly combined. Straight sections, curves and corners allow flexible configurations with a wide range of diameters and angles, enabling continuous, shadow-free lines of light.
